# Limited Warranty

---

Sensoray Company, Incorporated (Sensoray) warrants the Model 322 hardware to be free from defects in material and workmanship and perform to applicable published Sensoray specifications for two years from the date of shipment to purchaser. Sensoray will, at its option, repair or replace equipment that proves to be defective during the warranty period. This warranty includes parts and labor.

The warranty provided herein does not cover equipment subjected to abuse, misuse, accident, alteration, neglect, or unauthorized repair or installation. Sensoray shall have the right of final determination as to the existence and cause of defect.

As for items repaired or replaced under warranty, the warranty shall continue in effect for the remainder of the original warranty period, or for ninety days following date of shipment by Sensoray of the repaired or replaced part, whichever period is longer.

A Return Material Authorization (RMA) number must be obtained from the factory and clearly marked on the outside of the package before any equipment will be accepted for warranty work. Sensoray will pay the shipping costs of returning to the owner parts that are covered by warranty.

Sensoray believes that the information in this manual is accurate. The document has been carefully reviewed for technical accuracy. In the event that technical or typographical errors exist, Sensoray reserves the right to make changes to subsequent editions of this document without prior notice to holders of this edition. The reader should consult Sensoray if errors are suspected. In no event shall Sensoray be liable for any damages arising out of or related to this document or the information contained in it.

**EXCEPT AS SPECIFIED HEREIN, SENSORAY MAKES NO WARRANTIES, EXPRESS OR IMPLIED, AND SPECIFICALLY DISCLAIMS ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. CUSTOMER'S RIGHT TO RECOVER DAMAGES CAUSED BY FAULT OR NEGLIGENCE ON THE PART OF SENSORAY SHALL BE LIMITED TO THE AMOUNT THERETOFORE PAID BY THE CUSTOMER. SENSORAY WILL NOT BE LIABLE FOR DAMAGES RESULTING FROM LOSS OF DATA, PROFITS, USE OF PRODUCTS, OR INCIDENTAL OR CONSEQUENTIAL DAMAGES, EVEN IF ADVISED OF THE POSSIBILITY THEROF.**

# 1. Special Handling Instructions

---

The Model 322 circuit board contains CMOS circuitry that is sensitive to Electrostatic Discharge (ESD). Special care should be taken in handling, transporting, and installing the Model 322 to prevent ESD damage to the board. In particular:

- Do not remove the circuit board from its protective anti-static bag until you are ready to configure the board for installation.
- Handle the circuit board only at grounded, ESD protected stations.
- Remove power from the PCI system before installing or removing the circuit board.

## **2. Introduction**

### **2.1 General description**

The Sensoray Model 322 is a compact, rugged, and low cost PC104+ Video Graphics Adapter that combines the functionality of a high-powered desktop graphics adapter to provide a powerful graphics solution for embedded applications. The 322 is suitable for high bandwidth video and multimedia embedded applications taking full advantage of the PCI bus throughput, very wide video buffer memory, and multiple onboard video engines. Using the very latest in single chip video graphics controller, lower power consumption, enhanced reliability and ruggedness are characteristics of the 322. The 322 is compatible with any PC/104+ compliant CPU board such as the Sensoray Model 1101.

Outputs for a CRT monitor (RGB), a LCD flat panel display (DSTN and TFT), and a TV (NTSC and PAL) are available on the 322. Both composite and S-Video connectors are provided for TV output. The 322 allows for the LCD and CRT display devices to be used simultaneously. In addition, using Dual View capabilities, two different applications can be displayed on different devices or a portion of the primary display on the secondary display.

The 322 is fully VGA register compatible and can be used with any operating system that has a VGA drivers. A fully compliant VGA BIOS provides full compatibility with PC based systems. Enhanced drivers, available for Microsoft Windows 95, Windows 98, Windows 2000, Windows NT and LINUX, extend the functionality of the 322 by using the high performance capabilities of the video graphics controller (the advanced user can access the higher capabilities of the 322 in other operating systems by writing an appropriate driver that accesses the graphic controller's registers. Additional drivers may be available from Sensoray in the future.)

### **2.2 Features**

#### **2.2.1 VGA Core**

The 322 has a high performance 32-bit VGA core which is 100% IBM VGA compatible. The core provides all standard VGA functions. The 322 has a fully IBM PC compatible VGA BIOS.

#### **2.2.2 Video Memory System**

The Model 322 comes standard with 2.5MB of high speed video memory on a 128-bit memory bus embedded in the controller chip. With 2.5MB full color (24-bit) can be displayed at a maximum resolution of 1024x768 pixels.

#### **2.2.3 CRT Interface**

The 322 has a high speed, up to 135MHz, pixel clock for CRT displays. This allows for very high resolution at high vertical refresh rates. For example a vertical refresh rate of 75Hz at 1024x768 resolution or 85Hz at 640x480. At 1600x1280 a refresh rate of 60Hz is achieved.

#### **2.2.4 TV Output**

The 322 has both composite and S-Video TV outputs. Both NTSC and PAL standards are supported. A high quality BNC connector, for the composite signal, and a standard S-Video are provided onboard.

#### **2.2.5 LCD Controller**

The 322's LCD controller supports both color dual scan STN (passive) and color TFT (active) LCD panels. It can also support color TFT panel with RGB interface. The 322 has support for 16-bit color DSTN panels with resolution of up to 1280x1024. For color TFT panels, the 322 supports 9, 12, and 18-bit interfaces at single pixel per clock timing at up to 1280x1024 resolutions. The 322 also includes various features such as: LCD auto-centering, LCD screen expansion (including XY interpolation screen expansion), virtual refresh, and special dithering engines for TFT and DSTN flat panels. The LCD interface uses 3.3V voltage levels compatible with most low power LCD flat panels.

#### **2.2.6 Graphics and Video Engines**

A set of powerful graphics engines designed to accelerate 2D and 3D graphics. These engines include an IEEE floating point setup unit, a full featured 3D rendering engine, a 128-bit 2D drawing engine, a motion compensation block, and a video processor block. The drawing engine supports key GUI functions such as 3 operand ALU with 256 raster operations, pattern BLT, color expansion, trapezoid fill, and line draw. The IEEE Floating Point Setup and 3D rendering engines combine to

give high end 3D graphics performance to embedded computer systems with such features as Mip Mapping, Alpha Blending, Anti-Aliasing, Specular Highlights, and Fog, supported. For MPEG decoding, the motion compensation engine can significantly reduce CPU overhead. The video processor block manages the video of different video data formats and can perform such conversion as YUV to RGB and perform flicker reduction and adjustable overscan/underscan for TV display.

The 322's graphics and engines are designed to accelerate 2D and 3D graphics primarily through API's such as Microsoft Direct Draw and Direct3D. Some of the features can, however, be used by simply accessing on board registers; Silicon Motion Inc. documentation is required. The drawing/3D engine pipeline runs at a single clock per cycle at speeds up to 100MHz. If the customer is interested in developing their own API's, he/she should contact Silicon Motion Inc. for further information on the subject.

## 3. Specifications

This section lists the technical specifications of the Model 322 graphics adapter module.

### 3.1 Bus Specifications

PC/104-*plus* Specification Version 1.1 compliant

PCI Revision 2.1 compliant

PC/104 (ISA) compliant (see PC/104 specification V2.3)

Slot selection jumpers provided (Because of the stack through nature of the bus)

### 3.2 Video modes

All IBM compatible VGA modes are supported by the 322 BIOS. In addition, several extended modes are available including support for 132 columns, 1280x1024, 1024x768 and 800x600 resolutions, and higher color depths.

Notes on BIOS support for extended modes:

Bios support for all non-IBM standard VGA modes consists only of the ability to set the mode. Other BIOS calls such as write character, scrolling, write pixel etc., are not supported. Software applications and drivers should not expect the BIOS to do anything other than setting the mode.

#### 3.2.1 Standard IBM Compatible VGA Modes

| Table 1 Standard IBM Compatible VGA Modes |      |        |       |            |      |             |             |            |              |              |        |
|---|------|--------|-------|------------|------|-------------|-------------|------------|--------------|--------------|--------|
| Mode# (Hex)                               | Type | Colors | Alpha | Resolution | Font | Clock (MHz) | Hsync (KHz) | Vsync (Hz) | Memory (Min) | Buffer Start | Page 1 |

(Note: For modes 3 and 7, 8-dot fonts are used on the LCD)

### 3.2.2 Vesa Super VGA Modes

Vesa extended video modes are supported by the 322 BIOS (subject to the constraints of the video subsystem hardware) as follows:

| Table 2 VESA Super VGA Modes |               |      |        |         |            |      |              |            |
|------------------------------|---------------|------|--------|---------|------------|------|--------------|------------|
| Mode# (Hex)                  | Extended Mode | Type | Colors | Alpha   | Resolution | Font | Memory (Min) | Vsync (Hz) |
| 101                          | 50            | Gr   | 256    | 80x30   | 640x480    | 8x16 | 512K         | A0000      |
| 102                          | 6A            | Gr   | 16     | 100x75  | 800x600    | 8x8  | 256K         | A0000      |
| 103                          | 55            | Gr   | 256    | 100x75  | 800x600    | 8x8  | 512K         | A0000      |
| 104                          | 6B            | Gr   | 16     | 128x48  | 1024x768   | 8x16 | 512K         | A0000      |
| 105                          | 60            | Gr   | 256    | 128x48  | 1024x768   | 8x16 | 1M           | A0000      |
| 107                          | 65            | Gr   | 256    | 160x64  | 1280x1024  | 8x16 | 2M           | A0000      |
| 111                          | 52            | Gr   | 64K    | 80x30   | 640x480    | 8x16 | 1M           | A0000      |

| 114                          | 57            | Gr   | 64K    | 100x75  | 800x600    | 8x8  | 1M           | A0000      |
| 115                          | 58            | Gr   | 16M    | 100x75  | 800x600    | 8x8  | 2M           | A0000      |
| 117                          | 62            | Gr   | 64K    | 128x100 | 1024x768   | 8x8  | 2M           | A0000      |
| 118                          | 63            | Gr   | 16M    | 128x100 | 1024x768   | 8x8  | 4M           | A0000      |
| 11A                          | 67            | Gr   | 64K    | 160x128 | 1280x1024  | 8x8  | 4M           | A0000      |
| 11B                          | 68            | Gr   | 16M    | 160x128 | 1280x1024  | 8x8  | 4M           | A0000      |

### 3.2.3 Extended Modes

The 322 BIOS supports NTSC and PAL modes for TV as well as extended graphics modes.

Resolutions of the extended graphics modes start from 320x200 up to 1280x1024. In addition, the BIOS supports hi-color modes with resolutions up to 1280x1024, and 16M colors with resolutions up to 1280x1024.

### 3.2.4 NTSC and PAL TV Modes

The 322 displays both NTSC and PAL interlaced and at a resolution of 640x480. Note that all TV modes are used by the BIOS and Windows driver internally to support TV features. Unexpected results may occur if users try to call these modes through the BIOS.

### 3.2.5 Low Resolution Modes

The 322 BIOS supports low resolution modes from 320x200 to 640x400 in 8/16-bit colors for DirectDraw. The low resolution modes are defined as follows:

| Table 3 Low Resolution Modes |      |        |             |            |              |              |
|------------------------------|------|--------|-------------|------------|--------------|--------------|
| Mode# (Hex)                  | Type | Colors | Resolutions | Vsync (Hz) | Video Memory | Buffer Start |
| 40                           | Gr   | 256    | 320x200     | 70         | 1MB          | A0000        |
| 41                           | Gr   | 64K    | 320x200     | 70         | 1MB          | A0000        |
| 42                           | Gr   | 256    | 320x240     | 75/60      | 1MB          | A0000        |
| 43                           | Gr   | 64K    | 320x240     | 75/60      | 1MB          | A0000        |
| 44                           | Gr   | 256    | 400x300     | 75/60      | 1MB          | A0000        |
| 45                           | Gr   | 64K    | 400x300     | 75/60      | 1MB          | A0000        |
| 46                           | Gr   | 256    | 512x384     | 75         | 1MB          | A0000        |
| 47                           | Gr   | 64K    | 512x384     | 75         | 1MB          | A0000        |
| 48                           | Gr   | 256    | 640x400     | 70         | 1MB          | A0000        |
| 49                           | Gr   | 64K    | 640x400     | 70         | 1MB          | A0000        |

(Note: For modes 3 and 7, 8-dot fonts are used on the LCD.)

### 3.2.6 640x480 Extended Modes

| Table 4 640x480 Extended Modes |                        |      |                 |                 |      |               |                       |                      |                 |                 |

### 3.3 Driver support

MS-DOS using VGA BIOS  
MS Windows 95  
MS Windows 98

MS Windows 2000  
MS Windows NT  
LINUX

### 3.4 Board Size

Size 4.5 x 3.8 x 0.6 inches (114 x 97 x 15 mm)  
Compatible with the PC/104+ specification, slightly wider to accommodate connectors.  
Weight Adapter only: 3.5 oz. (100 gm)

### 3.5 Power Specifications

Power consumption: 3.75W, typical @ 5Vdc  $\pm$ 5%.  
This value will depend on the displays selected and the resolution being used.

### 3.6 Operating Environment

Operating Temperature Range: 0°C to 70°C.  
Humidity: 5 to 95% relative humidity (non-condensing).  
Storage temperature: -55°C to +85°C.

### 3.7 Power On Configuration

The 322 is configured to boot with the CRT display enabled and all other displays disabled.  
The default LCD type is set to 800x600 TFT. Contact Sensoray for other resolutions or for DSTN.

### 3.8 Supported LCD flat panels

#### 3.8.1 Supported XGA Panels 1024x768

| Table 10 Supported XGA Panels 1024x768 |            |                |  |
|--|------------|----------------|--|
| Manufacturer                           | Panel Type | Interface type | Model Number                           |
| Sharp                                  | DSTN       | 24-bit         | LM1577 (300ms)                         |
| Sharp                                  | DSTN       | 24-bit         | LM13X32                                |
| Torisan (Sanyo)                        | DSTN       | 24-bit         | LM-GD53-22NAZ (300ms)                  |
| NEC                                    | TFT        | 12-bit x 2     | NL10276AC24-01                         |
| Hitachi                                | TFT        | 18-bit         | TX31D61VC1CBD (Single chip 65MHz LVDS) |
| Hitachi                                | TFT        | 18-bit         | TX34D68VC1CCA                          |
| Hyundai                                | TFT        | 18-bit         | HT14X11-101                            |
| Torisan                                | TFT        | 18-bit         | TM133XG-02L02                          |

### 3.8.2 Supported SVGA Panels 800x600

| Table 11 Supported SVGA Panels 800x600 |            |                |                        |
|--|------------|----------------|------------------------|
| Manufacturer                           | Panel Type | Interface type | Model Number           |
| Hitachi                                | DSTN       | 16-bit         | LMG9982ZWCC (300ms)    |
| Hitachi                                | DSTN       | 16-bit         | LMG9980ZWCC-02 (300ms) |
| Hitachi                                | DSTN       | 16-bit         | SX31S002               |
| Sanyo                                  | DSTN       | 16-bit         | FE53-22WTK (300ms)     |
| Sanyo                                  | DSTN       | 16-bit         | LM-JK63-22NTR (150ms)  |
| Advanced Display Inc.                  | TFT        | 18-bit         | AA121SJ01              |
| HITACHI                                | TFT        | 18-bit         | TX31D27VC1CCAA         |
| IBM                                    | TFT        | 18-bit         | ITSV53L                |
| National/Panasonic                     | TFT        | 18-bit         | EDTCB11QEF             |
| NEC                                    | TFT        | 18-bit         | NL8060AC26             |
| Samsung                                | TFT        | 18-bit         | LT12151-153            |
| Sharp                                  | TFT        | 18-bit         | LQ11S42                |
| Sharp                                  | TFT        | 18-bit         | LQ12S31                |

### 3.8.3 Supported VGA Panels 640x480

| Table 12 Supported VGA Panels 640x480 |            |                |                      |
|---------------------------------------|------------|----------------|----------------------|
| Manufacturer                          | Panel Type | Interface type | Model Number         |
| Tottori Sanyo                         | DSTN       | 16-bit         | LM-DD53-22NEK        |
| Sharp                                 | TFT        | 18-bit         | LQ10D421/LQ104V1DG11 |
| NEC                                   | TFT        | 18-bit         | NL6448BC33           |
| Panasonic                             | TFT        | 18-bit         | EDTCB07QLF           |

## 3.9 Connector Information

### 3.9.1 CRT VGA Connector (J6)

Any industry standard DB 15 male connector will plug into this connector. For pin outs see Table 15 Page 9

### 3.9.2 Composite Video connector (J3)

Any industry standard male RCA type video (phone) jack will plug into this connector.

### 3.9.3 S-Video connector (J1)

Any industry standard 4 pin male Mini Din connector will plug into this connector. For pin outs see Table 17 Page 16.  
Example: Digikey part# 2751029ND

### 3.9.4 Mixed Signal Header (J2)

The connector mounted on the board is a 20 pin, shrouded, 2mm header. For pin outs see Table 16 Page 16.  
Molex part # 87331-2020.

Consult Molex to find an IDC ribbon cable connector that will mate with this connector.

**Note** When selecting a connector/cable combination for this connector make sure that the cable exits the connector in the correct direction so that it does not exit into the CRT VGA connector (J6).

### 3.9.5 LCD flat panel connector (J4)

The connector mounted on the board is a 30 pin, shrouded, 2mm right angled header. For pin outs see Table 19 Page 17.  
Molex part# 87333-3020.

Consult Molex to find an IDC ribbon cable connector that will mate with this connector.

## 4. Installation

### 4.1 Introduction

This chapter describes how to configure, connect and install the Sensoray Model 322 PC104+ Video Graphics Adapter.

### 4.2 PCI Slot and Interrupt Jumper Configuration

All PCI based systems require unique signal lines to be routed to each PCI slot. Because a PC/104+ system's cards are stacked and all the PCI signals are bussed, the PCI slot is selected on the individual expansion card. There is a set of jumpers on the 322 for PCI slot selection. Each PC/104+ card must have a unique slot number selected in order to avoid address conflicts.

**NOTE:** The 322 cannot behave as a PCI bus master when setup for slot 3. This is because the PCI signals, GNT and REQ, are not connected for this slot.

#### 4.2.1 PCI Slot Selection

Check the legend printed on the printed circuit board alongside the slot selection jumpers (JP2, JP3, JP5, JP6) to determine the physical position of the jumper for the position shown in Table 13 above.

| Table 13 PCI Slot Selection |   |
|-----------------------------|---|
| Slot number                 | Jumper position<br>(Must be set the same on JP2, JP3, JP5, JP6) |
| 0                           | 2-4   |
| 1                           | 4-6   |
| 2                           | 1-3   |
| 3                           | 3-5   |

### 4.2.2 PCI Interrupt Selection

The PCI interrupt that will be routed to the 322 is selected using JP4.

| Table 14 PCI Interrupt |                      |
|------------------------|----------------------|
| Interrupt              | JP4 jumper position. |
| A                      | 2-4                  |
| B                      | 4-6                  |
| C                      | 1-3                  |
| D                      | 3-5                  |

### 4.3 CRT interfacing

The 322 has a standard 15-pin DB style VGA connector (J6) for easy CRT monitor interfacing. These signals are also available on the mixed signal header 20 pin 2mm metric header (J2). Only analog monitors are supported. The 322 supports nearly all compatible multi-frequency VGA type monitors. A pinout summary of the DB15 connector is given in Table 15 and of the Mixed signal header in Table 16.

The CRT output signals are conditioned with ferrite beads on the board to minimize EMI (electromagnetic interference). Still, care should be taken to shield the embedded system and the video output cables to keep RF emissions as low as possible. FCC RF emissions regulations may apply to systems built with the 322. It is the responsibility of the customer to make their systems compliant with FCC regulations.

| Table 15 CRT DB15 (J6) pinout |                 |
|-------------------------------|-----------------|
| Pin                           | Function        |
| 1                             | Red             |
| 2                             | Green           |
| 3                             | Blue            |
| 4                             | N/C             |
| 5                             | Ground          |
| 6                             | Signal Ground   |
| 7                             | Signal Ground   |
| 8                             | Signal Ground   |
| 9                             | N/C             |
| 10                            | Ground          |
| 11                            | Ground          |
| 12                            | N/C             |
| 13                            | Horizontal Sync |
| 14                            | Vertical Sync   |
| 15                            | N/C             |

| Table 16 Mixed Header (J2) pinout |                 |
|-----------------------------------|-----------------|
| Pin                               | Function        |
| 1                                 | Signal Ground   |
| 2                                 |                 |
| 3                                 | Signal Ground   |
| 4                                 |                 |
| 5                                 | Signal Ground   |
| 6                                 | Signal Ground   |
| 7                                 | Red             |
| 8                                 | Signal Ground   |
| 9                                 | Green           |
| 10                                | Signal Ground   |
| 11                                | Blue            |
| 12                                | Signal Ground   |
| 13                                | Ground          |
| 14                                | Horizontal Sync |
| 15                                | Ground          |
| 16                                | Vertical Sync   |
| 17                                | Ground          |
| 18                                | Signal Ground   |
| 19                                | Composite Video |
| 20                                | Signal Ground   |

### 4.4 TV Interfacing

The 322 has two TV outputs: A composite and a S-video output. A BNC, J3, is provided for the composite signals and a standard 4-pin Mini-DIN connector, J1, for the S-video signal. Standard video cables can be used to connect the 322 to either a NTSC or PAL TV monitor. Both of these sets of signals are also available on the mixed signal header J2. (See Table 16 P16).

| Table 17 S-Video (J1) pinout |               |
|------------------------------|---------------|
| Pin                          | Function      |
| 1                            | Y-Out         |
| 2                            | C-Out         |
| 3                            | Signal ground |
| 4                            | Signal ground |

## 4.5 LCD interfacing

### 4.5.1 LCD Type Selection

Prior to connecting the LCD panel jumpers JP7, JP8, JP9, JP10 must be set for either DSTN or TFT type panels.

| Type | JP7, JP8, JP9, JP10 jumper positions. |
|------|---------------------------------------|
| DSTN | 1-2                                   |
| TFT  | 2-3                                   |

All the signals needed for a variety of DSTN (16-bit) or TFT (9/12/18-bit) color LCD flat panels are provided on J4. The 322 uses 3.3V signaling and has CMOS outputs. Cable lengths should be kept short, if longer cables are required external buffering should be used.

**WARNING:** Standard CMOS precautions should be observed with the 322 LCD outputs.

### 4.5.2 LCD Connector and Pinouts

The flat panel interface signals appear at the 30-pin 2mm metric header connector, J4, as shown in Table 19. Signal names are different for DSTN and TFT displays and there is no generally agreed upon standard among flat panel manufacturers. The names we use and the descriptions of the signal should provide enough information to connect either a DSTN or TFT flat panel.

#### Signal descriptions

**R0-R5** - TFT red signal bits.

**G0-G5** - TFT green signal bits.

**B0-B5** - TFT blue signal bits.

**LD0-UD7** - Lower 8-bits of a 16-bit DSTN display.

**UD0-UD7** - Upper 8-bits of a 16-bit DSTN display.

**HSYNC** - Horizontal Sync pulse for TFT displays.

**VSYNC** - Vertical Sync pulse for TFT displays.

**LP** - Load Pulse. A DSTN equivalent of HSYNC.

**XCK, CK** - Flat panel shift clock. This is the pixel clock for flat panel data.

**FP** - Frame Load Pulse. A DSTN equivalent of VSYNC.

**ENABLE** - Display Enable. This signal is used to indicate the active horizontal display time.

**FPEN** - Flat Panel enable. This signal needs to become active after all panel voltages, clocks, and data are supplied. This signal also needs to become inactive before any panel voltages or control signals are removed.

**VEE\_EN** - Panel Enable VEE. This is one of the two power sequencing signals that are used to control power lines connected to an LCD flat panel. This one is designed to properly control the VEE supply to the panel. See the following section for details.

**VDD\_EN** - Panel Enable VDD. This is one of the two power sequencing signals that are used to control power lines connected to an LCD flat panel. This one is designed to properly control the main power to the panel. See the following section for details.

| Pin | Color DSTN | Color TFT (1 pix/clock) |          |        |
|-----|------------|-------------------------|----------|--------|
|     | 16-Bit     | 9-Bit                   | 12-Bit   | 18-Bit |
| 1   | Ground     | Ground                  | Ground   | Ground |
| 2   | Ground     | Ground                  | Ground   | Ground |
| 3   | LD0        | B0                      | B0       | B0     |
| 4   | LD1        | B1                      | B1       | B1     |
| 5   | LD2        | B2                      | B2       | B2     |
| 6   | LD3        | Not used                | B3       | B3     |
| 7   | LD4        | Not used                | Not used | B4     |
| 8   | LD5        | Not used                | Not used | B5     |
| 9   | LD6        | G0                      | G0       | G0     |
| 10  | LD7        | G1                      | G1       | G1     |
| 11  | Ground     | Ground                  | Ground   | Ground |

| 22  | Not used   | Not used                | Not used | R5     |
| 23  | LP         | HSYNC                   | HSYNC    | HSYNC  |
| 24  | FP         | VSYNC                   | VSYNC    | VSYNC  |
| 25  | Not used   | ENABLE                  | ENABLE   | ENABLE |
| 26  | FPEN       | FPEN                    | FPEN     | FPEN   |
| 27  | XCK        | CK                      | CK       | CK     |
| 28  | VDD_EN     | VDD_EN                  | VDD_EN   | VDD_EN |
| 29  | Ground     | Ground                  | Ground   | Ground |
| 30  | VEE_EN     | VEE_EN                  | VEE_EN   | VEE_EN |

### **4.5.3 LCD Power Sequencing**

Most LCD panels are sensitive to the order in which power and control signals are applied during start up and how they are removed during shut down. LCD panel manufacturers warn of damaging panels or limiting their life span unless proper precautions are taken. If an LCD display is used, you will need to provide power-switching circuits. Power sequencing requirements can vary from panel to panel. In general, however, the startup sequence is:

1. Apply VDD to the panel
2. Apply control and data signals
3. Apply VEE to the panel
4. Set FPEN active

Similarly, when powering down the sequence is:

1. Set FPEN inactive
2. Remove VEE from the panel
3. Remove control and data signals
4. Remove VDD from the panel

The 322 provides signaling for power sequencing that is compatible with most flat panels. The signals VEE\_EN and VDD\_EN are usually used to drive external power switches. The switch circuitry design depends on the requirements of the specific LCD display. Contact the display manufacturer for the required information.

## **4.6 Drivers**

Once the Sensoray 322 board is physically installed. Boot the operating system and choose to upgrade or install with one of the display device drivers provided by Sensoray.

If any of the advanced features like rotation, display switching etc are to be used then download the control panel application. The same control panel install program is used for all the Windows products supported.

This will integrate into the desktop display settings and allow the user to switch displays and exercise various other functions of the 322 board.

Download the control panel from: (Approximately 10M).

## 5. BIOS

### 5.1 Overview

This section discusses the 322 BIOS functionality. The Bios includes all IBM standard VGA modes as well as extended VGA modes ranging from 640x480 up to 1280x1024 and VESA compatible modes. The BIOS also provides extended BIOS function calls for implementing various features of the 322.

### 5.2 BIOS Size and Format

The 322 is supplied with a version of the BIOS burnt into about 48K of a 64K EPROM. The BIOS is also available as a RAM BIOS, which is a TSR version of the EPROM version. Contact Sensoray for further information.

### 5.3 Bios Features

#### 5.3.1 Flat Panel Expansion

A 1024x768 panel is expanded to 960x750 except for 640x480 resolution which is expanded to 960x720 for better display quality. For text expansion when using a 1024x768 panel, there is an option that if GPR0[7]=1, the BIOS expands text mode to 800x600 and centers the display.

#### 5.3.2 NTSC/PAL TV Support

The 322 is capable of driving a NTSC/PAL TV from an integrated TV encoder with Macrovision. The following items should be noted regarding the operation of this feature:

1. The display is interlaced because of TV requirement.
2. TV enable bit must be set.
3. The resolution for both NTSC and PAL is 640x480.
4. The CRT should not be driven when TV is driven.
5. TV only mode is supported.

Two sets of new video modes (i.e., one for NTSC and one for PAL) are created to interface with this feature.

#### 5.3.3 Display Switching

The 322 supports various display settings that users can switch between. The video BIOS supports an INT 10h call to enable display switching and must determine whether the hardware necessary is available.

Display switching can be from LCD, CRT, or Simul mode (LCD & CRT) to TV mode or from TV mode to LCD, CRT, or Simul mode.

##### 5.3.3.1 Panel Power Sequencing

The 322 supports flat panel power sequencing control in both hardware and software, which is defined by FPR34[7]

##### 5.3.3.2 Hardware Panel Power Sequencing Control

The 322 power-on setting selects hardware for panel power sequencing control with FPR34[7] =1. Panel power on/off is done by simply programming FPR31[0] from 0 to 1 to turn on panel display or from 1 to 0 to turn off panel display. Register FPR33[3:2] allows adjustment of the time interval between each panel control signal.

| FPR33[3:2] | Power On/Off Sequencing Time Select |
|------------|-------------------------------------|
| 00         | 1 vertical frame                    |
| 01         | 2 vertical frames                   |
| 10         | 4 vertical frames                   |
| 11         | 8 vertical frames                   |

### 5.3.3.3 Software Panel Power Sequencing Control

The software panel power sequencing control is set by FPR34[7] = 0.

The example below assumes FPR33[3:2] = 00.

To turn on flat panel:

- set FPR31[0] = 1 - enable LCD display
- wait 1 vertical frame period, set PDR22[0] = 1 - turn on FPVDD
- wait 1 vertical frame period, set PDR22[1] = 1 - enable flat panel interface outputs
- wait 1 vertical frame period, set PDR22[2] = 1 - turn on panel bias voltage
- wait 1 vertical frame period, set PDR22[3] = 1 - turn on FPEN output

To turn off flat panel:

- set PDR22[3] = 0 - turn off FPEN output
- wait 1 vertical frame period, set PDR22[2] = 0 - turn off panel bias voltage
- wait 1 vertical frame period, set PDR22[1] = 0 - disable flat panel interface outputs
- wait 1 vertical frame period, set PDR22[0] = 0 - turn off FPVDD
- set FPR31[0] = 1 - disable LCD display

## 5.4 Standard IBM VGA Compatible BIOS Functions

The Bios supports all of the following the standard IBM Compatible BIOS calls.

(Functions other than Set Mode are not supported in extended modes).

| Table 20 Standard IBM VGA Compatible BIOS Functions |  |
|---|--|
| Call # ax =   | Function                                 |
| 0x00xx  | Set Mode                                 |
| 0x01xx  | Set Cursor Type                          |
| 0x02xx  | Set Cursor Position                      |
| 0x03xx  | Read Cursor Position                     |
| 0x05xx  | Select Active Display Page               |
| 0x06xx  | Scroll Active Page Up                    |
| 0x07xx  | Scroll Active Page Down                  |
| 0x08xx  | Read Attribute/Character at Cursor       |
| 0x09xx  | Write Attribute/Character at Cursor      |
| 0x0Axx  | Write Character Only at Cursor           |
| 0x0Bxx  | Set Color Palette, Background, or Border |
| 0x0Cxx  | Write Pixel                              |
| 0x0Dxx  | Read Pixel                               |
| 0x0Exx  | Write TTY Character                      |
| 0x0Fxx  | Read Current Video State                 |
| 0x1000  | Set Individual Palette Register          |
| 0x1001  | Set Overscan Register                    |
| 0x1002  | Set All Palette and Overscan Register    |
| 0x1003  | Toggle Blink/Intensity Bit               |
| 0x1007  | Read Individual Palette Register         |
| 0x1008  | Read Overscan Register                   |
| 0x1009  | Read All Palette and Overscan Register   |
| 0x1010  | Set Individual Color Register            |
| 0x1012  | Set Block of Color Registers             |
| 0x1013  | Select Color Page                        |
| 0x1015  | Read Individual Color Register           |
| 0x1017  | Read Block of Color Registers            |
| 0x1018  | Write Pixel Mask                         |

|                |   |
|----------------|---|
| 0x1019         | Read Pixel Mask                                       |
| 0x101A         | Read Current Color Page Number                        |
| 0x101B         | Sum Color Values to Gray Scale                        |
| 0x1100         | User Alpha Load                                       |
| 0x1101         | Load ROM 8x14 Monochrome Set                          |
| 0x1102         | Load ROM 8x8 Set                                      |
| 0x1103         | Set Block Specifier                                   |
| 0x1104         | Load ROM 8x16 Character Set                           |
| 0x1110         | User Alpha Load and Reprogram Controller              |
| 0x1111         | Load ROM 8x14 Monochrome Set and Reprogram Controller |
| 0x1112         | Load ROM 8x8 Set and Reprogram Controller             |
| 0x1114         | Load ROM 8x16 Set and Reprogram Controller            |
| 0x1120         | User Graphics Characters INT 1FH 8x8                  |
| 0x1121         | User Graphics Characters                              |
| 0x1122         | Graphics Mode ROM 8x14 Character Set                  |
| 0x1123         | Graphics Mode ROM 8x8 Set Double Dot                  |
| 0x1124         | Graphics Mode ROM 8x16 Set                            |
| 0x1130         | Return Character Generator Information                |
| 0x1200 bl=0x10 | Return Video Information                              |
| 0x1200 bl=0x20 | Select Alternate Print Screen Routine                 |
| 0x1200 bl=0x30 | Select Scan Lines for Alphanumeric Modes              |
| 0x1200 bl=0x31 | Default Palette Loading During Mode Set               |
| 0x1200 bl=0x32 | Video Enable/Disable                                  |
| 0x1200 bl=0x33 | Summing to Gray Scales                                |
| 0x1200 bl=0x34 | Cursor Emulation                                      |
| 0x1200 bl=0x35 | Display Switch  |
| 0x1200 bl=0x36 | Video Screen On/Off                                   |
| 0x13xx         | Write String of Characters                            |
| 0x1Axx         | Read/Write Display Combination Code                   |
| 0x1Bxx         | Return State Information                              |
| 0x1Cxx         | Save/Restore Video State                              |

## 5.5 Extended BIOS Function Calls

| Table 21 Extended BIOS Function Calls |   |
|---------------------------------------|---|
| Call # ax =                           | Function  |
| 5F00h                                 | Get Current VGA Information                       |
| 5F05h                                 | Set Panel On                                      |
| 5F06h                                 | Set Panel Off                                     |
| 5F0Eh                                 | Monitor Detection                                 |
| 5F10h BX=0                            | PopUp Icon Control                                |
| 5F10h BX=1                            | PopUp Icon Size                                   |
| 5F10h BX=2                            | PopUp Icon Location                               |
| 5F10h BX=3 CH=1                       | PopUp Icon Color1                                 |
| 5F10h BX=3 CH=2                       | PopUp Icon Color2                                 |
| 5F10h BX=3 CH=3                       | PopUp Icon Color3                                 |
| 5F10h BX=5                            | Load PopUp Icon Bitmap                            |
| 5F12h                                 | Display Switching Status                          |
| 5F13h                                 | Switch Display To LCD                             |
| 5F14h                                 | Switch Display To CRT (with monitor detection)    |
| 5F15h                                 | Switch Display To Simul                           |
| 5F16h                                 | Switch Display To CRT (without monitor detection) |
| 5F19h*                                | Set Text Exp./Graphics Exp./Stretch               |
| 5F20h                                 | Set Extended Memory                               |
| 5F21h                                 | Switch from LCD to TV                             |
| 5F22h                                 | Switch from CRT to TV                             |
| 5F23h                                 | Switch from Simul to TV                           |
| 5F24h                                 | Switch from TV to LCD                             |
| 5F25h                                 | Switch from TV to CRT                             |
| 5F26h                                 | Switch from TV to Simul                           |

### 5.5.1 Get Current VGA Information - 5F00h

Returns the current VGA information.

#### Input

AX 5F00h

#### Output

AX Return status  
0=Success, 1=Fail

BX Chip ID

CH Revision number

CL Memory size in MB

DH Display type  
01=LCD Only  
10=CRT Only  
11=CRT/LCD (Simultaneous)

DL Flat Panel type (FPR30)

### **5.5.2 Set Panel On - 5F05h**

Sets the panel ON.

Input

AX 5F05h

Output

AX Return status  
0=Success, 1=Fail

### **5.5.3 Set Panel Off - 5F06h**

Sets the panel OFF.

Input

AX 5F06h

Output

AX Return status  
0=Success, 1=Fail

### **5.5.4 Monitor Detection - 5F0Eh**

Detects if there is a monitor attached.

Input

AX 5F0Eh

Output

AX Return status  
0=Success, 1=Fail  
BX 1=Monitor attached  
0=No monitor

### **5.5.5 PopUp Icon Control - 5F10h**

Pops up the icon control on the screen. It is up to the user to define what the icon is.

Input

AX 5F10h  
BX 0  
CL 0-disable  
1-enable

Output

NONE

### **5.5.6 PopUp Icon Size - 5F10h**

Defines the size of the icon.

Input

|    |                      |
|----|----------------------|
| AX | 5F10h                |
| BX | 1                    |
| CL | 0-64x64<br>1-128x128 |

Output

NONE

### **5.5.7 PopUp Icon Location - 5F10h**

Defines the location of the icon on the screen.

Input

|    |                                   |
|----|-----------------------------------|
| AX | 5F10h                             |
| BX | 2                                 |
| CX | X Start (Pop90[7:0] & Pop91[2:0]) |
| DX | Y Start (Pop92[7:0] & POP93[2:0]) |

Output

NONE

### **5.5.8 PopUp Icon Color1 - 5F10h**

Defines the first color of the icon.

Input

|    |                   |
|----|-------------------|
| AX | 5F10h             |
| BX | 3                 |
| CH | 1 (POP84)         |
| CL | [7:0] color value |

Output

NONE

### **5.5.9 PopUp Icon Color2 - 5F10h**

Defines the second color of icon.

Input

|    |                   |
|----|-------------------|
| AX | 5F10h             |
| BX | 3                 |
| CH | 2 (POP85)         |
| CL | [7:0] color value |

Output

NONE

**5.5.10 PopUp Icon Color3 - 5F10h**

Defines the third color of icon.

## Input

AX 5F10h  
 BX 3  
 CH 3 (POP86)  
 CL [7:0] color value

## Output

NONE

**5.5.11 PopUp Icon Bitmap - 5F10h**

Loads the bitmap file of icon.

## Input

AX 5F10h  
 BX 5  
 ES:SI Bitmap address (16 bit)

## Output

NONE

**5.5.12 Display Switching Status - 5F12h**

Called before switching takes place and returns the switching allowed status. Switching is not allowed as long as virtual refresh is on. There is no support for this function call when in Dual Monitor mode and in the SMI special modes (Stretch and rotation).

## Input

AX 5F12h

## Output

ABL 0=OK to switch  
 1= Not allowed to switch

**5.5.13 Switch Display to LCD - 5F13h**

Switches display to LCD in standard refresh mode.

## Input

AX 5F13h

## Output

AX 0=Success  
 1=Fail

### **5.5.14 Switch Display to CRT - 5F14h**

Switches display to CRT in standard refresh mode by calling set mode routine.

Input

AX 5F14h

Output

AX 0=Success  
1=Fail

### **5.5.15 Switch Display to Simul - 5F15h**

Switches to simultaneous display of CRT and LCD for standard refresh only.

Input

AX 5F15h

Output

AX 0=Success  
1=Fail

### **5.5.16 Switch Display to CRT only - 5F16h**

Switches to the CRT display without detecting monitor.

Input

AX 5F16h

Output

AX 0=Success  
1=Fail

### 5.5.17 Set Text Expansion/Graphics Expansion/Stretch - 5F19h

Sets DOS modes text and graphics expansion and extended modes in stretch.

#### Input

|    |  |
|----|--|
| AX | 5F19h  |
| BH | 1-get stretch/text expansion/graphics expansion status<br>0-set stretch/text expansion/graphics expansion            |
| BL | Bit 0 0-text expansion off<br>1-text expansion on  |
|    | Bit 1 0-graphics expansion off<br>1-graphics expansion on  |
|    | Bit 2 0-stretch off<br>1-stretch on  |
|    | Bit 3 0-stretch/graphics/text status depends on bit [2,1,0]<br>1-stretch status overwrite DOS text and graphics mode |

#### Output

|    |  |
|----|--|
| AX | 0=Success<br>1=Fail  |
| BL | Text expansion/graphics expansion/stretch status (get status only)<br>All bit [3:0] parameters need to be provided   |
|    | Bit 0 0-text expansion off<br>1-text expansion on  |
|    | Bit 1 0-graphics expansion off<br>1-graphics expansion on  |
|    | Bit 2 0-stretch off<br>1-stretch on  |
|    | Bit 3 0-stretch/graphics/text status depends on bit [2,1,0]<br>1-stretch status overwrite DOS text and graphics mode |

When bit 3 =1, the status of bit [2:0] needs to be set the same way (either all 0 or all 1)

When bit 3=0, the status of bit [2:0] can be set independently

Note that BL does not return status for set function.

### 5.5.18 Set Extended Memory - 5F20h

Sets the extended memory accessing environment for save/restore hotkey function.

#### Input

|    |       |
|----|-------|
| AX | 5F20h |
|----|-------|

#### Output

NONE

### 5.5.19 Switch from LCD to TV display - 5F21h

Switches from LCD mode to TV display mode.

#### Input

|    |       |
|----|-------|
| AX | 5F21h |
|----|-------|

#### Output

|    |                     |
|----|---------------------|
| AX | 0=Success<br>1=Fail |
|----|---------------------|

### **5.5.20 Switch from CRT to TV display - 5F22h**

Switches from CRT mode to TV display mode.

Input

AX 5F22h

Output

AX 0=Success  
1=Fail

### **5.5.21 Switch from Simul to TV display - 5F23h**

Switches from Simul mode to TV display mode.

Input

AX 5F23h

Output

AX 0=Success  
1=Fail

### **5.5.22 Switch from TV to LCD display - 5F24h**

Switches from TV mode to LCD display mode.

Input

AX 5F24h

Output

AX 0=Success  
1=Fail

### **5.5.23 Switch from TV to CRT display - 5F25h**

Switches from TV mode to CRT display mode.

Input

AX 5F25h

Output

AX 0=Success  
1=Fail

**5.5.24 Switch from TV to Simul display - 5F26h**

Switches from TV only mode to Simul display mode.

## Input

AX 5F26h

## Output

AX 0=Success  
1=Fail

## 5.6 INT15 System BIOS Function Calls

The 322 BIOS contains a number of INT15 system BIOS function calls. Each one of them provides the system BIOS an opportunity to gain control in the different VGA BIOS areas.

| Table 22 INT15 System BIOS function calls |   |
|---|---|
| 7F00h                                     | VGA POST Initialization                             |
| 7F01h                                     | Get Panel ID  |
| 7F02h                                     | Boot Display Device Override                        |
| 7F03h                                     | Do Expansion/Centering                              |
| 7F04h                                     | Normal Setmode/Special Setmode                      |
| 7F05h                                     | Select TV Format                                    |
| 7F06h                                     | Get TV support status                               |
| 7F07h                                     | Set subsystem and subvendor IDs                     |
| 7F08h                                     | Set Text Exp./Graphics. Exp./Stretch initial status |
| 7F09h                                     | Get Dual Monitor Support Status                     |
| 7F0Ah                                     | Set TV DAC option                                   |
| 7F0Fh                                     | VGA POST Completion Signal                          |

### 5.6.1 VGA POST Initialization - 7F00h

Called prior to displaying VGA banner.

Input

AX 7F00h

Output

AX 007Fh Success  
Else not supported

### 5.6.2 Get Panel ID - 7F01h

Gets the panel ID.

Input

AX 7F01h

Output

AX 007Fh Success  
Else not supported  
BL Panel ID (See below)

Note: There are 15 custom panel ID's specified by the BL register from 0 to 0eh. The value 0fh indicates the BIOS is using default panel timing.

| Table 23 Panel ID |                    |
|-------------------|--------------------|
| 00                | 640x480 TFT        |
| 01                | 640x480 DSTN       |
| 02                | 800x600 TFT        |
| 03                | 800x600 DSTN       |
| 04                | 1024x768 TFT       |
| 05                | 1024x768 DSTN      |
| 06                | 800x600 DSTN 75 Hz |
| 07                | Reserved           |
| 08                | Reserved           |
| 09                | Reserved           |
| 10                | Reserved           |
| 11                | Reserved           |
| 12                | Reserved           |
| 13                | Reserved           |
| 14                | Reserved           |

### 5.6.3 Boot Display Device Override - 7F02h

Determines the type(s) of display device during system bootup. If this function fails then BIOS would set to the default setting.

|        |    |   |
|--------|----|---|
| Input  | AX | 7F02h   |
| Output | AX | 007Fh Success<br>Else not supported                                     |
|        | BL | Display type<br>01-LCD only<br>02-CRT only<br>03-LCD+CRT (Simultaneous) |

### 5.6.4 Do Expansion or Centering - 7F03h

Determines whether display should be in Expansion or centering mode.

|        |    |                                      |
|--------|----|--------------------------------------|
| Input  | AX | 7F03h                                |
| Output | BL | 0-Centering mode<br>1-Expansion mode |

### 5.6.5 Normal Set Mode or Special Set Mode - 7F04h

Determines the set mode process is Normal or Special.

|        |    |   |
|--------|----|---|
| Input  | AX | 7F04h   |
| Output | AX | 007Fh-Normal Set mode<br>017fh-Special before 'Save to Disk' Set mode |

### 5.6.6 Select TV Type - 7F05h

Determines the TV type is either NTSC or PAL.

|        |    |                         |
|--------|----|-------------------------|
| Input  | AX | 7F05h                   |
| Output | AX | 007fh-NTSC<br>017fh-PAL |

### 5.6.7 Get TV Support Status - 7F06h

Determines if TV support is requested or not.

|        |    |   |
|--------|----|---|
| Input  | AX | 7F06h   |
| Output | AX | 007Fh-Need to check BL for TV support status<br>Else don't care (&F06h function not called) |
|        | BL | 0-no TV support<br>1-TV supported   |

### **5.6.8 Set sub-vendor and sub-system ID's - 7F07h**

Returns sub-vendor and sub-system ID.

Input

AX 7F07h

Output

AX 007Fh  
BX Sub-system ID  
CX Sub-vendor ID

### **5.6.9 Select Text Expansion/Graphic Expansion/Stretch initial status - 7F08h**

Determines the power on initial status of expansion for text and graphics DOS modes and stretch for extended modes.

Input

AX 7F08h

Output

AX 007Fh Success  
BL Text Expansio/Graphics Expansion/Stretch status  
All Bit [3:0] parameters need to be provided  
Bit 0 0-text expansion off  
1-text expansion on  
Bit 1 0-graphics expansion off  
1-graphics expansion on  
Bit 2 0-stretch off  
1-stretch on  
Bit 3 0-Stretch/Graphics/Text status depends on bit [2,1,0]  
1-Stretch status overwrite DOS text graphics mode

When bit3=1, the status of bit [2:0] needs to be set the same way (Either all 0 or all 1).

When bit 3=0, the status of bit [2:0] can be set independently.

### **5.6.10 Get Dual Monitor Support Status - 7F09h**

Gets the dual monitor support status.

Input

AX 7F09h

Output

AX 007Fh Success  
BL 0-enable dual monitor support  
1-disable dual monitor support

### **5.6.11 TV DAC Option - 7F0Ah**

Selects the TV DAC option.

Input

AX 7F0Ah

Output

AX 007Fh Success  
Else fail  
BL[1:0] 00-SVHS off, CVBS off  
01-SVHS off, CVBS on  
10-SVHS on, CVBS off  
11-SVHS on, CVBS on

Note: IF this function call is not used, the default is SVHS and CVBS DAC are both on. (BL[1:0]=11)

**5.6.12 VGA POST Completion Signal - 7F0Fh**

Notifies system BIOS that VGA finished its initialization.

Input

AX 7F0Fh

Output

NONE

## 5.7 VESA BIOS Functions

VESA BIOS calls 0-8, as defined in the VESA Extended BIOS Function Specification, version 1.2, are supported by the BIOS. In addition, this BIOS also supports VESA BIOS Extensions / Power Management (VBE/PM) 2.0 standard which is implemented as sub-function 10h and VESA Display Data Channel Standard version 2.0, which is implemented as sub-function 15h. The functionality of these VESA calls are as follows:

| Table 24 VESA BIOS Function Calls  |  |   |
|------------------------------------|--|---|
| FUNCTION                           | INPUT  | OUTPUT  |
| Return Super VGA Information       | AH= 4Fh<br>AL= 00h<br>ES:DI= Pointer to buffer   | AX= Status  |
| Return Mode Information            | AH= 4Fh<br>AL= 01h<br>CX= Mode<br>ES:DI= Pointer to buffer   | AX= Status  |
| Mode Set                           | AH= 4Fh<br>AL= 02h<br>BX= Video Mode<br>D0:14= Video mode<br>D15= Clear video memory flag<br>0=Clear video memory<br>1=Don't clear   | AX= Status  |
| Return Current Video Mode          | AH= 4Fh<br>AL= 03h   | AX= Status<br>BX= Current Video Mode                                |
| Save/Restore Super VGA Video State | AH= 4Fh<br>AL= 04h<br>DL= 00h: Return save/restore state buffer size<br>CX Requested states<br>Bit 0= Save/restore video hardware state<br>Bit 1= Save/restore BIOS data state<br>Bit 2= Save/restore video DAC state<br>Bit 2= Save/restore Super VGA state | AX= Status<br>BX= Number of 64 byte blocks to hold the state buffer |
|                                    | AH= 4Fh<br>AL= 04h<br>DL= 01h: Save Super VGA video state<br>CX= Requested states (see above)<br>ES:BX= Pointer to buffer  | AX= Status  |
|                                    | AH= 4Fh<br>AL= 04h<br>DL= 02h: Restore Super VGA video state<br>CX= Requested states (see above)<br>ES:BX= Pointer to buffer   | AX= Status  |

| Table 24 VESA BIOS Function Call - (Continued) |   |   |
|--|---|---|
| FUNCTION                                       | INPUT   | OUTPUT  |
| CPU Video Memory Window control                | AH= 4Fh   | AX= Status  |
|  | AL= 05h   |   |
|  | BH= 00h: Select window  |   |
|  | BL= Window Number<br>0=Window A<br>1=Window B   |   |
|  | DX= Window position (in granularity units)  |   |
|  | AH= 4Fh<br>AL= 05h<br>BH= 01h: Return window<br>BL= Window Number<br>0=Window A<br>1=Window B   | AX= Status<br>DX= Window position (in granularity units)  |
| Set/Get Logical Scan                           | AH= 4Fh<br>AL= 06h<br>BH= 00h: Select scan line length<br>CX= Desired width in Pixels   | AX= Status<br>BX= Bytes per scan line<br>CX= Actual pixels per scan line<br>DX= Maximum number of scan lines            |
|  | AH= 4Fh<br>AL= 06h<br>BL= 01h: Return scan line length  | AX= Status<br>BX= Bytes per scan line<br>CX= Actual pixels per scan line<br>DX= Maximum # of scan lines                 |
| Set/Get Display Start                          | AH= 4Fh<br>AL= 07h<br>BH= 00h: Reserved and must be 0<br>BL= 00h: Select display start<br>CX= First displayed pixel in scan line<br>DX= First displayed scan line | AX= Status  |
|  | AH= 4Fh<br>AL= 07h<br>BL= 01h: Select display start   | AX= Status<br>BH= 00h Reserved and will be 0<br>CX= First displayed pixel in scan line<br>DX= First displayed scan line |
| Set/Get DAC Palette Control                    | AH= 4Fh<br>AL= 08h<br>BL= 00h<br>BH= Desired number of bits of color per primary (standard VGA=6)   | AX= Status<br>BH= Current number of bits of color per primary (Standard VGA=6)  |
|  | AH= 4Fh<br>AL= 08h<br>BL= 01h: Get DAC palette width  | AX= Status<br>BH= Current number of bits of color per primary (Standard VGA=6)  |

| Table 24 VESA BIOS Function Call - (Continued) |  |  |
|--|--|--|
| FUNCTION                                       | INPUT  | OUTPUT   |
| Display Power Management Extensions            | AH= 4Fh<br>AL= 10h: VBE/PM Services<br>BL= 00h: Report VBE/PM Capabilities<br>CX= 00h: Controller unit number (00=primary controller)  | AX= Status<br>BH= Power saving state signals supported by the controller<br>1=supported<br>0=not supported<br>bit 0- Standby<br>bit 1- Suspend<br>bit 2- Off<br>bit 3- Reduced On<br>bit 4-7 reserved<br>BL= VBE/PM Version number<br>bit 0-3 Minor version #<br>bit 4-7 Major version #<br>CX= Unchanged<br>DX= Unchanged |
