# Software Installation

Windows CE does not require any specific installation procedure. Simply copy the `sx11.dll` file together with your application or to `/windows/system` directory or build OS image including this file.

Use only CE executable (.exe, .dll) files; Windows98/NT/2000/XP executable files are not compatible to CE. Also, different versions of CE may require rebuilding your applications and using compatible edition of the `sx11.dll`.
