PC/104 Isolated Power Supply

Sensoray has developed the Model 207 PC/104 Isolated Power Supply. It converts input voltages of 9-36 VDC to output voltages +5 VDC at 2 A maximum rating and +/- 12 VDC at 0.42 A maximum rating. The 207 has -25°C to 71°C operating range and 1500 V maximum input/output isolation. Three different terminations for applying input power are available. One of these is a spring-loaded terminal block that accepts two wires without the use of a connector or wire terminal lugs. There are two output terminations for supplying regulated power to external devices. A resettable fuse protects the unit from reverse input voltages and over current. Three LED's indicate output power is available. The PC/104+ connector allows placing the 207 in any position within a card stack. Single piece price: \$159 for 5 V and \$240 for 5V & 12V.
