

USB MPEG capture device

Portland, Oregon-April 7, 2006

Sensoray introduces the 2250 USB MPEG capture device

Sensoray introduces the newest addition to their video capture products, the 2250. The 2250 converts analog NTSC or PAL color video and audio into one of the supported MPEG digital video formats: MPEG1, MPEG2 (MP@ML) or MPEG4 (SP@L3). A wide range of supported bitrates allows for an optimal size/quality ratio for various applications. The device connects to the host computer and is powered through a USB 2.0 port. The SDK for Microsoft Windows makes it easy to integrate video capture into any application. The 2250 is shipped in a metal enclosure. Board level version is available for OEMs.

The single piece price is \$ 281.00. Additional price breaks available.
