Highly Integrated PCI Machine Control

Sensoray Company has developed the low cost Model 626 interface to save valuable space in PCI bus systems. The model 626 combines five functions into a half-size card. It has six versatile bi-directional 24-bit counters/timers, four 13-bit D/A outputs with a 20 kHz update rate, sixteen 14-bit differential A/D inputs operating at a 50 kHz sample rate, and 48 bi-directional digital signals compatible with solid state relay boards, sixteen of these have edge detection and can generate interrupts. All six counters can be used with quadrature encoders. The Model 626 also incorporates a watchdog timer that may be used to reset the PCI bus. In the event of a power failure the 626 has a battery backup for the counter channels. The 626 is supplied with a 32-bit DLL for Windows 95/98 and NT, which allows the use of multiple 626 boards. Optional ActiveX controls are also available. Five flat ribbons will connect the 626 to external breakout boards. Pricing @ qty (1) is \$500 and qty 100+ is \$350. Model 626 is available now.
