

Introduction

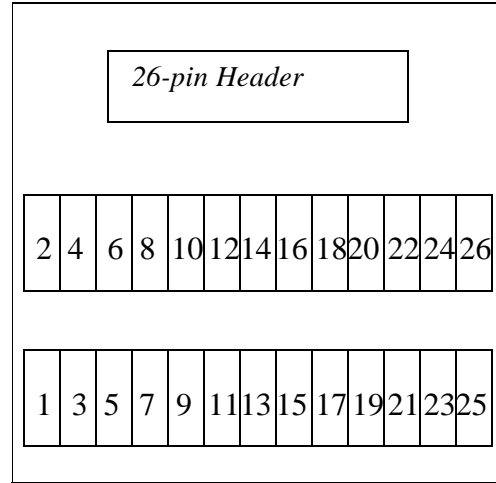

Sensoray Models 7503/7503TDIN are industrial-grade termination boards that may be used to break out standard 26-pin headers (with 100 mil pin spacing) onto robust screw terminals.

The Model 7503 is an electromechanical assembly consisting of a circuit board with integral 26-pin header and screw terminals. Model 7503TDIN consists of a Model 7503 assembly mounted onto DIN rail mounting hardware.

Pin Functions

Header pins and screw terminals have a one-to-one relationship. Pin 1 of the header connects to screw terminal 1, etc.
