Upgrades to Sensoray USB Video Card with H.264 Compression

Tigard, OR - In addition to being a small form factor (1.5" x 2.75") with low power consumption (1.5 W), **Sensoray's Model 2253S** has also met the rigorous safety, health, and environmental standards of the European Union in order to attain the CE mark.

The latest software release from Sensoray allows MP4 files to be edited in Adobe Premiere with A/V sync preserved. We have also doubled the On Screen Display (OSD) text to 160 characters.

The **Model 2253S** can also perform as a decoder, converting the compressed audio/video stream into standard analog video and audio signals, as well as offering closed-caption support for H.264 streams. It is well-suited for uncompromising capture of multiple video sources, such as radar and sonar processing, remote video surveillance and traffic monitoring.

Sensoray provides an SDK for the Model 2253S that includes drivers, programming examples and comprehensive documentation for both Windows and Linux operating systems.
